E-procurement at Weimar-Werk GmbH

CLIENT:

Weimar-Werk GmbH
Thüringenweg 2
99427 Weimar

PROJECT COMPLETED BY:

Blumenbecker Industriebedarf GmbH
Sudhoferweg 99-107
59269 Beckum
T: +49 2521 8406-0
bib.beckum@blumenbecker.com

COMMISSION:

Introduction of an e-procurement system for
the procurement of c-parts

Execution: End of 2018

COMPLETE SERVICE FOR THE PROCUREMENT OF C-PARTS

Whether you need a single part or a complete machine - we provide you with premium solutions for the optimization of your processes. We offer professional e-procurement solutions in various expansion stages and integrate them into your operational processes. Together with the customer, we analyze the purchasing processes, classify the requirements and thus find the optimal solution - always individually tailored to the customer and his workflows.

WEIMAR-WERK GMBH

■ Weimar-Werk GmbH is a steel and mechanical engineering company based in Thuringia. Its business fields include mechanical engineering and steel construction, conveyor technology and screening and crushing technology. The company is also active as a supplier for the beverage industry. It also manufactures stainless steel assemblies for the food industry. In 2018, the company employed 90 employees at two locations in Germany.

THE COMMISSION

■ Weimar Werk GmbH was looking for an electronic solution for C-parts procurement in mid-2018. The aim was to streamline commercial processes, shorten ordering times and minimize errors in the ordering process.

» *When problems arise, Blumenbecker responds quickly, with ambition and commitment.*«

Thomas Stegmann, Project Manager,
Weimar-Werk GmbH

CONTRACT SCOPE

Together with the customer, the purchasing processes were analyzed, the requirements classified and in this way the appropriate e-procurement solution was found for Weimar-Werk GmbH:

Eproc.III offers the possibility of structuring the entire procurement area in a modern way, evaluating it very well and also a good cost analysis in the project business. This is an Internet-based „on-demand solution“ that does not tie up any IT capacities. A connection to the customer's existing ERP system is also possible.

Twelve employees at Weimar-Werk are equipped with the eproc.III license. Here, the employee has online access to approx. 40,000 articles - imported especially for the customer - and can order directly. A further performance highlight of eproc.III is the creation of article favorites, which enables an order process to be realized in less than six minutes on average. The complete C-parts supply is handled via this system, including special parts such as chemicals. A contact person in the office ensures support and smooth processing.

THE ADVANTAGES

- | Reduction of the administrative effort, because the requester at Weimar-Werk GmbH is also the customer at the same time
- | Reduction of ordering times
- | Minimization of errors in the ordering process
- | Connection to the existing ERP system and mapping of cost centers
- | Paperless billing
